## Pre-Start Procedure

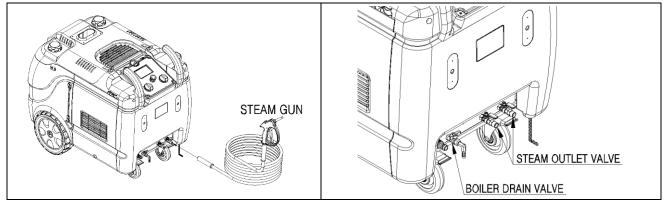

Wear appropriate protective gloves before using the product.

Surface of exhaust flue and valves may be hot.

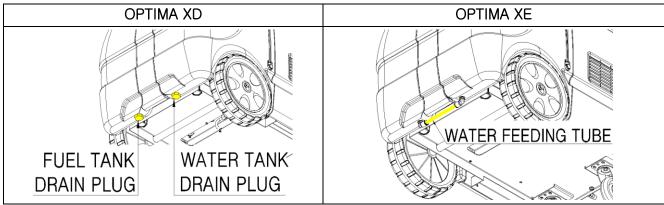

Take precautions when users resume operations.

Steps:

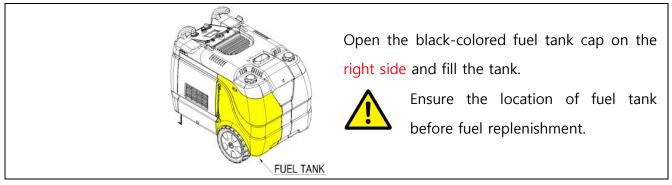

- 1. Connect steam hoses and guns to the steam outlet valves. Ensure a tight connection using appropriate tools.
- 2. Ensure that valves including drain valve, steam outlet valves are fully closed.

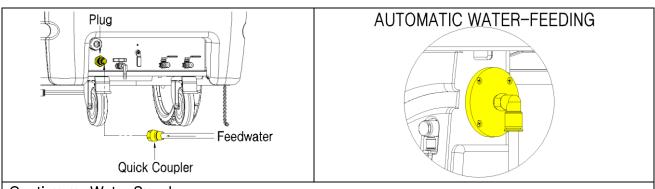

3. Ensure that tank drain plugs or water feeding tube are well-connected. (See illustrations below)

4. Fill the fuel tank. (\*For OPTIMA XD)

5. Fill the water tank with clean water. When tap water or hard water is used, use of a water softener is recommended to prevent scale build-up.

#### Continuous Water Supply

In the event of using continuous water supply, connect water hose attached with Quick Coupler to the Plug of the product.

Water pressure needs to be below 2bar from the tap for Floater to run effectively.

### Water Quality Matters!

Water quality can greatly affect the product's life span and performance. It is important to use SOFT WATER. If tap water or hard water is used, use of a water softener is recommended in order to prevent scale build-up.

DO NOT use distilled water. DO NOT add any detergent, wax or cleaning additives into the water tank or steam vessel. The use of water temperature above 5°C (40°F) recommended. Use filtered water above 15 ppm.

6. Check for electrical specifications before connecting to electrical power outlet.

## Shutdown operation

- 1. Switch off the STEAM.
- 2. After blower fan stops automatically (applied to XD model), switch off the POWER.
- 3. Release steam from the steam vessel by pulling the gun trigger until the pressure drops down to 1~2 kgf/cm²(28.4 psi).
- 4. Close the steam outlet valves and release all the remaining steam from the hoses by pulling the gun trigger.
- 5. Release remaining steam from the steam vessel by opening the drain valve.

Keep drain valve open for the next operation

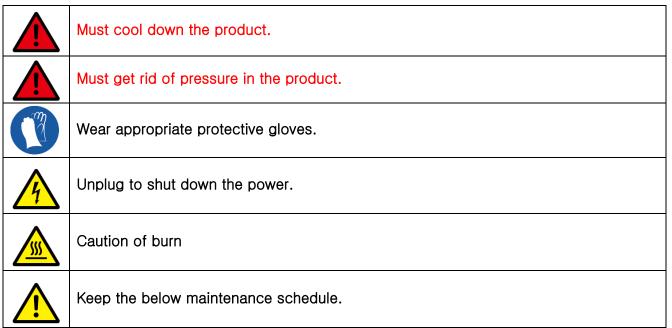

DANGER. Burn hazard! Hot steam. Keep hands clear.

6. In cold weather, take precautionary measures to keep water pipes from freezing and bursting. (See page 23, "Freeze Prevention").

## Freeze Prevention

In cold climates, it is necessary to store the product in an area where a temperature is above freezing.

Follow the below steps to protect your product against freezing and bursting.

#### Steps:

#### 1. Drain the steam vessel

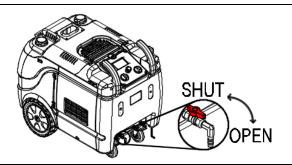

Reduce pressure under 2 kgf/cm<sup>2</sup>(28.4 psi) and then drain out water from the steam vessel by opening a drain valve. Leave the drain valve open until the next use.

Wear appropriate protective gloves for hands because steam is very hot.

Leave drain valve open until next use.

#### 2. Drain Water tank

Open a drain plug or water tank connection tube under the water tank.

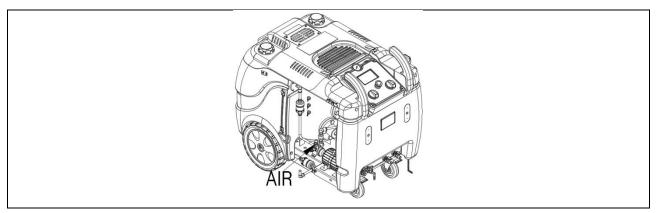

#### Caution : Slippery when wet.

OPTIMA XD	Open drain plug under the tank.
OPTIMA XE	Push the fitting and pull out the hose.

#### 3. Drain the water feeding lines and the water pump.

Open the drain valve, then disassemble/detach water feeding line like the below picture and drain all remaining water using compressed air. Keep drain valve open until next use.

#### 4. Storage

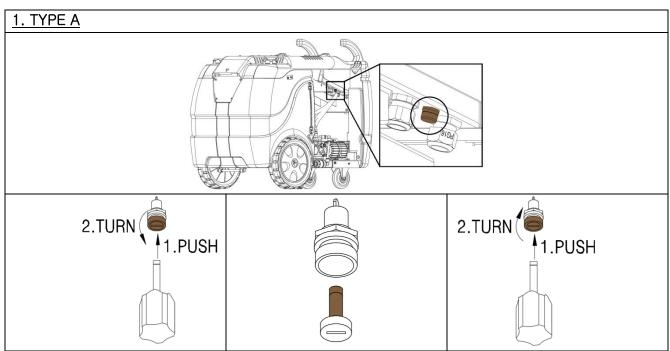

Keep Product in a warm place to prevent for being frozen.

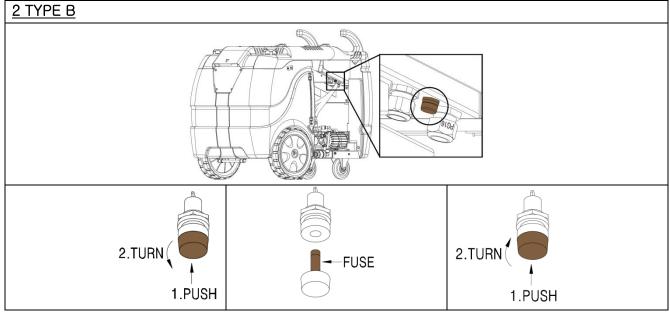

Pipe line or parts can be ruptured, if product is frozen badly. Freeze can cause malfunction. If product would be frozen, do not operate it immediately.

Put the product in warm place in order to thaw. After that, check if there is any damage. If the machine is visually damaged or performs abnormally, immediately turn off the machine and contact your distributor or manufacturer.
